TRACK & TRACE
SYSTEM

More industries require track and trace. From raw materials, production process and packaging up to the end user. Key is to supply a system that will ensure the compliance with regulatory authorities.

Sollas has teamed up with Antares Vision and Norwix who have a proven technology applied on billions of SKUs. Antares Vision supplies the cameras, software and data management system. Norwix supplies thermal inkjet technology with easy changeable cartridges for applying the unique QR code.

How it works

For each individual carton a serial number will be generated and associated. With this a unique digital identity is created and added to the product that represents a bridge between the pyshical product and digital world.

With a parent-child relation through the serial number hierarchy it is possible to identify also the single products when they are wrapped in a bundle. With this the producer always has real-time information available and accessible.
